

PURATM+

THE MOULD ELIMINATOR THAT PUTS YOUR HEALTH FIRST

Here's why your mould issue is best treated with PURA+TM

- You're not exposed to odours and corrosive chemicals that are often used for removing mould
- Treatment can be done in one visit
- Damage to your wallpaper + furnishings is avoided
- Mould is killed including the roots, giving the least chance of it regrowing (most mould sprays use bleach and will merely whiten it)
- The PURA+TM leaves an anti-microbial barrier and when this is dry, it continues to kill any further mould growth
- You don't have to vacate the property while the work is being done

STAGE 1

ENCAPSULATOR

Powerful organic formula for encapsulating spores and breaking down the mould

STAGE 2

ERADICATOR

An effective level of biocides that work together to kill the mould and roots, and remains active when dry

"Pura+ is great... We've been very impressed with the feedback we've been getting"

Solihull Housing

"Maxam Pura+ ...is the only one that does not have any ill health effects associated with it for general use"

H&S, Walsall Housing

"Really easy to use, no unpleasant fumes, able to use on wallpaper with no discolouration at all, honestly I was shocked how effective it was with no damage to decoration"

Vivid Homes

MOULD STAINING

As the PURA+ treatment doesn't contain dangerous bleach, it can leave behind a staining from black mould. We can assure you the correct process has been completed to fully remove spores and kill the mould roots. If visual staining remains, this is no longer harmful and may be visually removed during redecoration.

Contains PURA+ Stage 2, an authorised biocidal product with HSE number 11195-GB. Always read the label. Use biocides safely. Always read the label and product information before use.

Full application instructions are provided on the product label. SDS available on request.
